Section C: Reading (10marks)

Read the following passage carefully and answer the questions that follow. Use complete sentences and as far as possible, your own words.

ALTERNATIVE ENERGY SOURCES

The population recently reached the six billion mark and will continue to grow at an exponential rate in the future. As the population increases, so will the demands for resources like food, water and electricity. Renewable, clean and efficient power is increasingly important as limited fossil fuel sources slowly disappear, and pollution becomes more of an issue. However, the industry has already begun to answer many of the tough questions about where our power will come from in the future. Today, there are several ways of generating power. Nuclear, hydroelectric, wind, solar, coal, oil and gas, are the most significant methods. Many people believed solar power would solve the world's energy problems. After all, if we
